

What is the practical reason for local radio (or NAB) wanting to block my local traffic and weather from my satellite radio? This is a good service that they offer and I don't see why it would ever even be considered being blocked. Let the NAB work on making their service better rather than trying to restrict someone elses. If this is done, the consumer is the loser. Competition keeps this free country going. Let the NAB compete! Then the consumer is the winner.
